

Title: Old Vascular Lesion in Lentiform Nucleus
POT ID: ED16
Former ID: Ezbb(9) NP1414
Photo Record: 1585, 1586
Storage Location: Dissecting Room – Back shelf

Specimen: Coronal slices of cerebrum through the basal ganglia showing;

- 1) A sharply demarcated, irregular, partly cystic haemorrhagic softening in the right lentiform nucleus with minimal involvement of the internal capsule.
- 2) Slight swelling of the right hemisphere with compression of the lateral ventricles and the displacement of midline structures to the left.
- 3) An old cystic infarct in the corpus callosum.

NOTE:

This specimen was transferred from Edinburgh Medical School to BSMS in 2003; the donor from whom this specimen originates is unknown.
