

**Title:** Normal Larynx  
**Pot ID:** ED30  
**Former ID:** F3cd(2)  
**Photo Record:** 1433,1434  
**Storage Location:** Dissecting Room – Left side

This specimen shows a coronal section of the larynx, from the tongue to the carina of the trachea. On the specimen you can see the tongue, valleculae and epiglottis. The aryepiglottic folds are seen lateral to the epiglottis and the vestibular fold lies below the epiglottis. You can see the cut surfaces of the arch of the cricoid.

The trachea, with its cartilaginous hoops is visible to just below the carina.

**NOTE:**

This specimen was transferred from Edinburgh Medical School to BSMS in 2003; the donor from whom this specimen originates is unknown.
